"WE SERVICE BETTER"!

Mouse in your house?

If these rude rodents have you on the run, they'll be changing their thinking by the time we're done.

We'll Make Those Mice Think Twice!

We'll Tackle Your Ant Problems!

**Ants in your pants?
On your walls? In your plants?**

If you're plagued by these unwelcome guests just give us a call.

Household pests are not just a nuisance.

They carry and transmit diseases.

You have enough things to worry about.

Let us worry about how to rid your home of unwelcome pests.

Let us, protect you from all types of roaches, mice, rats, silverfish, house ants, earwigs, centipedes, millipedes, and crickets. Services to rid your home of spiders and fleas take more time and chemicals, which costs more.

We can come at your convenience on a monthly, bi-monthly, or quarterly basis. Or it can be a one-time trip.

No matter what your household pest problem, Wilson's Termite can help. Call us with any questions. We are a family-owned business and have been serving the Jackson area for over 20 years.

Our motto is **"We Service Better."**
Call us at 992-9351 and try us!

**Thank You ! Please Call Us If
Anything Is "BUGGIN YOU"!**

Termite Tips

Termites cost Americans over \$1 billion each year. That is more than is caused by all fires and storms combined - and earthquakes as well. Scientists say termites have been able to survive for over 250 million years. Your home may be their next target!

Termites attack and damage any building material that contains cellulose, such as wood used in home and building construction, drywall covered with paper, or siding materials containing cellulose. They will consume anything containing cellulose, including paper products, books, clothing, carpeting, and furniture. The most serious damage is the loss of structural strength in a building. The termites' activity generally goes unnoticed until extensive damage becomes visible, and the economic impact is substantial.

Houses and other wood structures can be protected from termites only if they are constructed and maintained properly, and a protective treatment is applied correctly.

The following are tips to help you prevent conditions that are inviting to termites. These tips, however, will not prevent or control infestations:

- Termites need only three things: soil, moisture and wood.
- Keep any firewood, scrap lumber, fencing and planter boxes from coming in contact with exterior siding. Do not store firewood in the garage.
- Divert sprinkler water away from exterior walls and foundation.
- Make sure that wood mulch used for landscaping is not in contact with siding.
- Promptly repair any water leaks and moisture problems in the roof, attic walls, bathroom, and sink areas.
- Install gutters and keep them clear of debris, to prevent the rainwater from disturbing the termiticide barrier around the foundation.
- Divert air conditioner condensation lines away from exterior walls and foundation.
- Set wooden posts supporting decks and fences on concrete or metal pads.
- Do not allow trees, shrubs, and their branches to touch your home.
- Correct any wood-to-ground contact.
- Call WILSON'S TERMITE & ENVIRONMENTAL SERVICES if you do any landscaping around your home or break the chemical barrier applied during your perimeter treatment for a free termite inspection. If you have a current termite contract with us, we will re-treat that area at no additional charge.
- Call WILSON'S TERMITE & ENVIRONMENTAL SERVICES if you have any pest questions and we will be happy to help you.
